

Name _____

At the Pool

Children at the pool were counted. Use the chart to answer the questions. Draw a model to the right of each problem. Then write an equation and use a strategy to solve.

Number of Children Seen at the Pool		
Time	Day 1	Day 2
1:00	15	17
2:00	29	22
3:00	46	25
4:00	31	18

1. How many children were seen at 1:00 on Day 1 and on Day 2?

$$\underline{15} + \underline{17} = \underline{32} \text{ children}$$

In 1-4, check students' drawings.

2. How many children were seen at 2:00 on Day 1 and on Day 2?

$$\underline{29} + \underline{22} = \underline{51} \text{ children}$$

3. How many children were seen in all at 3:00 and 4:00 on Day 1?

$$\underline{46} + \underline{31} = \underline{77} \text{ children}$$

4. How many children were seen in all at 2:00 and 4:00 on Day 2?

$$\underline{22} + \underline{18} = \underline{40} \text{ children}$$
